

DK/CP DN 15÷20
PVC-U / PVC-C / PP-H / PVDF

Pneumatically actuated 2-way diaphragm valve

DK/CP DN 15÷20

The new DK/CP diaphragm valve is particularly suitable for shutting off and regulating abrasive or dirty fluids. The new internal geometry of the body optimises fluid dynamic efficiency by increasing the flow rate and ensuring an optimum linearity of the flow adjustment curve. The DK/CP is extremely compact and very light.

PNEUMATICALLY ACTUATED 2-WAY DIAPHRAGM VALVE

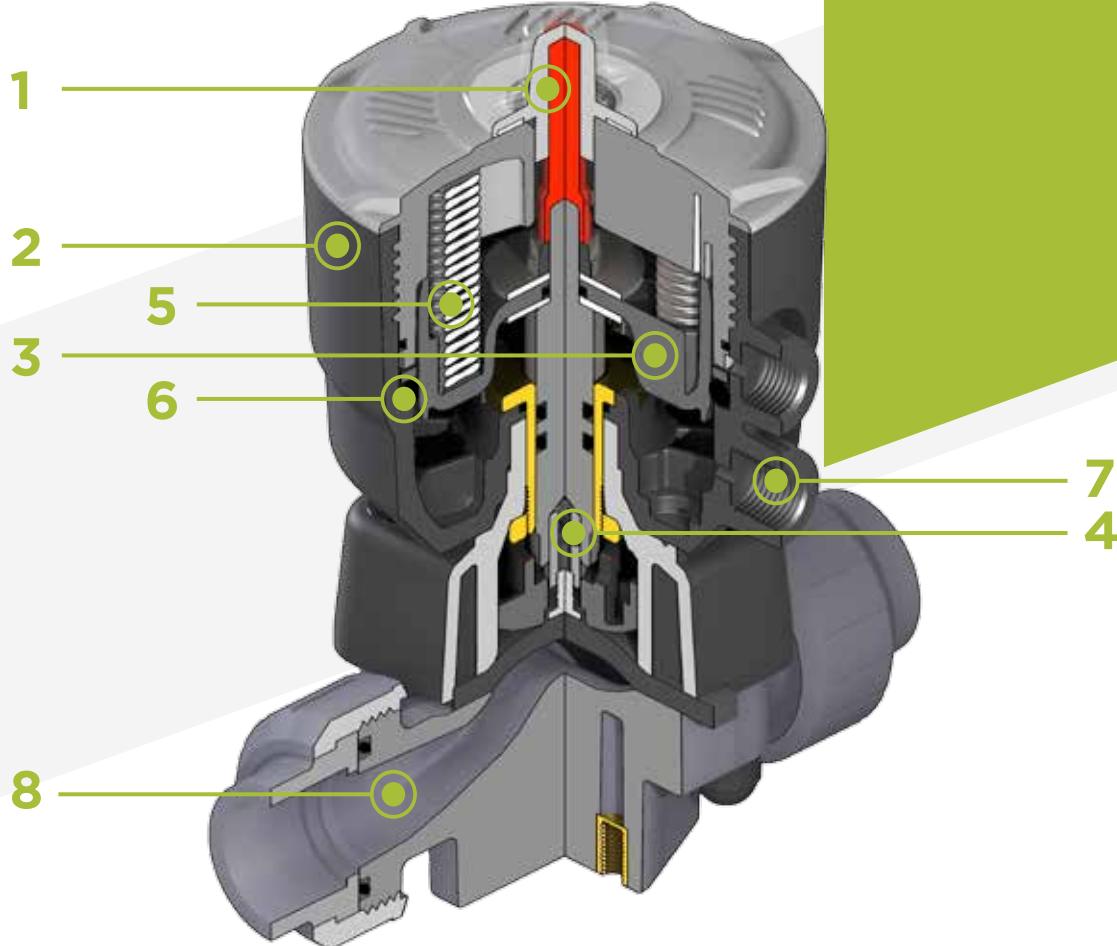

- Connection system for solvent weld, threaded and flanged joints
- **Optimised fluid dynamic design:** maximum output flow rate thanks to the optimised efficiency of the fluid dynamics that characterise the new internal geometry of the body
- **Light and compact piston actuator in PP-GR**, ideal for heavy-duty applications in chemically aggressive environments
- **High performance internal components:** piston in high strength IXEF® with high quality surface finish and Stem in stainless steel with double seal O-Ring
- Bonnet fastening screws in AISI 316 steel protected against the external environment by PE plugs. Absence of metal parts exposed to the external environment to prevent any risk of corrosion
- **CDSA** (Circular Diaphragm Sealing Angle) system that, thanks to the uniform distribution of shutter pressure on the diaphragm seal, offers the following advantages:
 - reduction in the tightening torque of the screws fixing the actuator to the valve body
 - reduced mechanical stress on all valve components (actuator, body and diaphragm)
 - easy to clean valve interior
 - low risk of the accumulation of deposits, contamination or damage to the diaphragm due to crystallisation

Technical specifications

Construction	Pneumatically actuated diaphragm valve with body at maximized flow rate
Size range	DN 15 ÷ 20
Nominal pressure	PN 10 with water at 20 °C
Temperature range	PVC-U: 0 °C ÷ 60 °C - PVC-C: 0 °C ÷ 100 °C PP-H: 0 °C ÷ 100 °C - PVDF: -20 °C ÷ 120 °C
Coupling standards	Solvent welding/Welding: EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, BS 4346-1, DIN 8063, NF T54-028, ASTM D 2467, ASTM F 439. Can be coupled to pipes according to EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931, DIN 8062, NF T54-016, ASTM D 1785, ASTM F 441 Thread: ISO 228-1, DIN 2999, ASTM D 2464 Flanging system: ISO 7005-1, EN ISO 1452, EN ISO 15493, EN 1092-1, EN ISO 15494, EN ISO 10931, EN 558-1, DIN 2501, ANSI B16.5 Cl.150, JIS B2220
Reference standards	Construction criteria: EN ISO 16138, EN ISO 1452, EN ISO 15493, EN ISO 15494, EN ISO 10931 Test methods and requirements: ISO 9393 Installation criteria: DVS 2204, DVS 2221, DVS 2202-1, DVS 2201-1, DVS 2207-11, DVS 2207-15, DVS 2208-1, UNI 11242, UNI 11318
Valve material	PVC-U / PP-H / PVDF / PVC-C
Diaphragm material	EPDM, FPM, PTFE (on request NBR)
Control options	Pneumatic actuator

The new compact and light piston actuator in PP-GR makes the DK/CP the ideal choice for applications requiring very frequent valve operation and a long valve lifetime.

Technical specifications - pneumatic actuator	
Construction	Single-acting (NC-NO) and double-acting (DA) pneumatic piston actuator
Actuator Material	Body and bonnet: PP-GR Position indicator cap PC
Control air pressure	Minimum: according to the working pressure and operation of the actuator (see detailed graphs) Maximum: NC: 7 bar - NO: 5 bar - DA: 5 bar
Power supply	Dry or lubricated filtered compressed air. If using other fluids, contact the FIP service centre
Control fluid temperature	Max 40 °C
Working temperature	-20 °C ÷ 50 °C
Standard equipment	<ul style="list-style-type: none"> • Optical position indicator
Accessories	<ul style="list-style-type: none"> • Stroke limiter with position indicator • Stroke limiter with position indicator and emergency manual override • Limit switch boxes • Electro-pneumatic positioner • Pilot solenoid valves 3-5/2 ways for direct or manifold mounting • Distance plate

1 High visibility optical position indicator protected by a transparent cover with O-Ring

2 Light and compact piston actuator in PP-GR, ideal for heavy-duty applications in chemically aggressive environments with a diaphragm perimeter containment system that ensures the perfect compression of the rubber without any lateral expansion

3 Piston in high strength IXEF®. The high quality finish of the external surface guarantees perfect slidability over the seal and ensures a long working life without any actuator maintenance

4 High strength stainless steel stem with double O-Ring

Floating pin connection between the actuator stem and diaphragm to prevent concentrated loads, improve the seal and extend its lifetime

5 Actuator equipped with 6 **independent cartridge springs** arranged radially to uniformly distribute the load on the piston

6 **Dual function main gasket.** **Piston seal:** the gasket does not move but sits securely on the actuator cylinder instead of the piston.
External seal: The gasket positioned above the threaded joint between the bonnet and cylinder ensures that the coupling is not stressed by the pressure inside the actuator

7 Easy to install, even in confined spaces: **compressed air inlets with G 1/4" threaded adjustable connections** to enable alignment with the piping

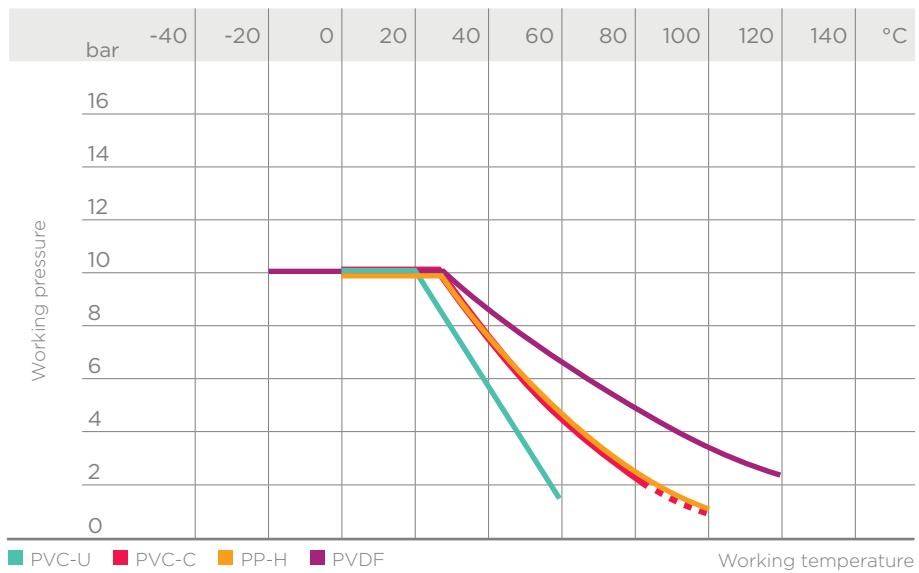

8 **New design of valve body interior**
Substantially increased flow coefficient and reduced pressure drop. The degree of efficiency reached has also enabled **the size and weight** of the valve to be **reduced**

Adjustment linearity: the internal profiles of the valve also greatly improve its characteristic curve, resulting in **extremely sensitive and precise adjustment** along the entire stroke of the shutter

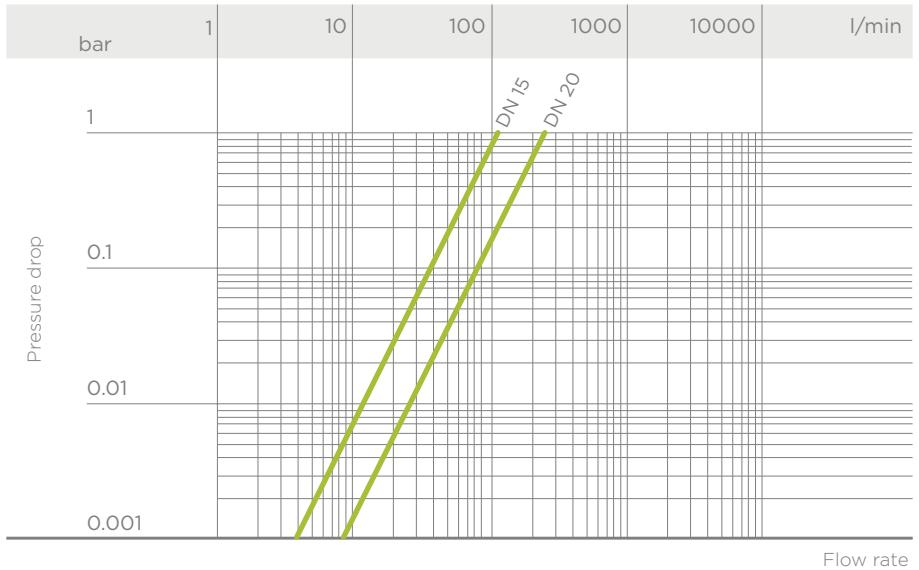

TECHNICAL DATA

PRESSURE VARIATION ACCORDING TO TEMPERATURE

For water and harmless fluids to which the material is classified as CHEMICALLY RESISTANT. In other cases, a reduction of the nominal pressure PN is required (25 years with safety factor).

PRESSURE DROP GRAPH

K_v100 FLOW COEFFICIENT

The K_v100 flow coefficient is the Q flow of litres per minute of water at a temperature of 20°C that will generate $\Delta p = 1$ bar pressure drop at a certain valve position.

The K_v100 values shown in the table are calculated with the valve completely open.

DN	15	20
K _v 100 l/min	112	261

TECHNICAL DATA

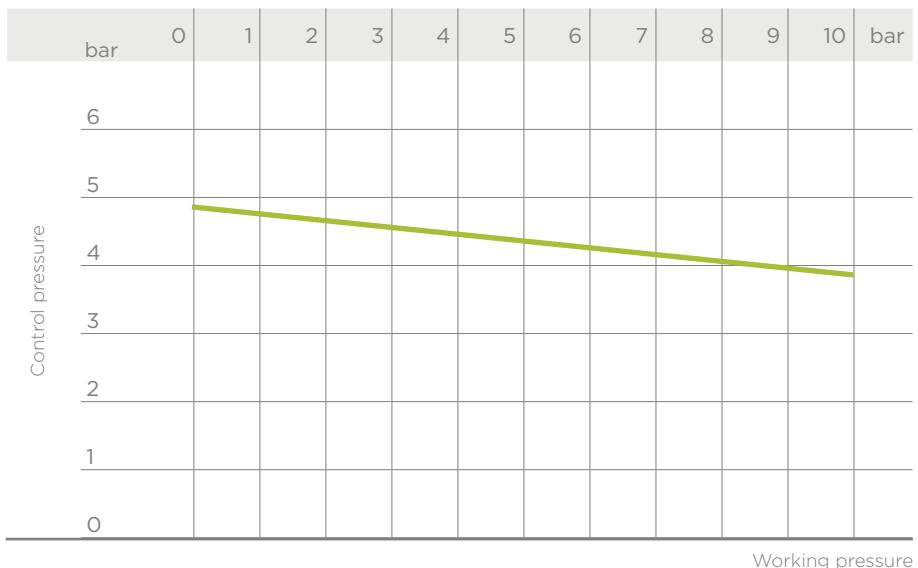

RELATIVE FLOW COEFFICIENT GRAPH

The relative flow coefficient refers to the variation in the flow rate as a function of the valve opening stroke

FASTENING AND SUPPORTING

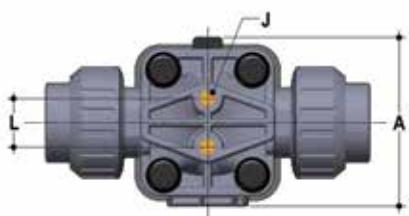

All valves, whether manual or actuated, must be adequately supported in many applications.

The DK valve series is therefore provided with an integrated bracket that permits direct anchoring of the valve body without the need of other components.

For wall installation, dedicated PMDK mounting plates which are available as accessories can be used. These plates should be fastened to the valve before wall installation.

The PMDK plate also allows the DK valve to be aligned with FIP ZIKM pipe clips.

CUSTOMISATION

The DK/CP DN 15÷20 valve can be customised using a customisation plate in white PVC.

The customisation plate (B), housed in the transparent protection cap (A), can be removed and, once overturned, used for indicating identification serial numbers or service indications on the valves such as, for example, the valve function in the system, the conveyed fluid, but also specific information for customer service, such as the customer name or installation date or location on the valves. The waterproof transparent protection cap with seal O-Ring protect the customisation plate against deterioration.

To access the customisation plate, proceed as follows:

- 1) Disconnect the valve from the pneumatic connections
- 2) Unscrew the transparent protection cap (fig. 1)
- 3) Remove the plate and proceed with the customisation (fig. 2).
- 4) Re-assemble everything making sure that the transparent protection cap O-Ring remains in its seating.

The material of the component and the quantity supplied are indicated between brackets

DISASSEMBLY

- 1) Isolate the valve from the line (release the pressure and empty the pipeline).
- 2) Open the valve with compressed air (NC-DA) to drain any residual liquid from the valve.
- 3) Disconnect the valve from the pneumatic and electrical connections
- 4) Fully unscrew the union nuts (11) and extract the valve sideways.
- 5) Remove the protection plugs (14) and bolts (13) with their washers (12) (this operation will be made easier if the actuator is pressurised (NC)).
- 6) Separate the valve body (8) from the actuator (4).
- 7) Unscrew the diaphragm (7) and remove the compressor (6) (this operation will be made easier if the actuator is not pressurised (NC)).

ASSEMBLY

- 1) Insert the compressor (6) on the actuator stem (4) aligning it correctly in its housing (fig. 3).
- 2) Screw the diaphragm (7) onto the stem, aligning it correctly with its housing on the actuator.
- 3) Mount the actuator (4) on the valve body (8) and screw in the bolts (13) with the relative washers (12) (this operation will be made easier if the actuator is pressurised (NC)).
- 4) Tighten the bolts (13) evenly (diagonally) to the tightening torque suggested on the relative instruction sheet.
- 5) Replace the protection plugs (14)
- 6) Position the valve between the end connectors (10) and tighten the union nuts (11), making sure that the socket seal O-rings (9) do not exit their seats.
- 7) Reconnect the valve to the pneumatic and electrical connections

Fig. 3

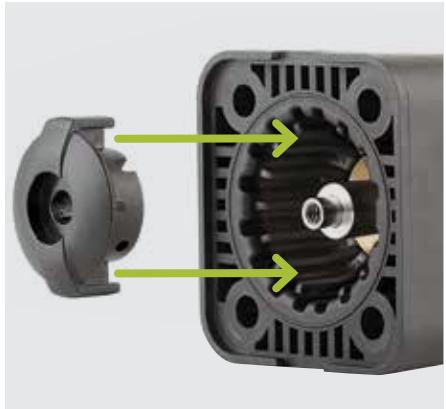

Fig. 4

INSTALLATION

Before proceeding with installation, please follow these instructions carefully: (these instructions refer to union ends versions). The valve can be installed in any position and in any direction.

- 1) Check that the pipes to be connected to the valve are aligned in order to avoid mechanical stress on the threaded joints.
- 2) Unscrew the union nuts (11) and insert them on the pipe segments.
- 3) Solvent weld or screw the end connectors (10) onto the pipe ends.
- 4) Position the valve body between the end connectors, making sure that the socket seal O-rings (9) do not exit their seats.
- 5) Fully tighten the union nuts (11).
- 6) If necessary, support the pipework with FIP pipe clips or by means of the carrier built into the valve itself (see paragraph "Fastening and supporting").
- 7) Connect the compressed air as indicated in paragraph "Compressed air connections". For valves with electric accessories, refer to the specific technical manual supplied with the accessory.

When installing in confined spaces, the connections can be oriented in line with the piping (fig. 4).

Note: before putting the valve into service, check that the bolts on the valve body (8) are tightened correctly at the suggested torque.
